

**When someone calling your Company is put on 'hold' by the operator...
what does he listen to?**

A boring, repetitive hold tone or, worse, an icy silence? Being put on 'hold' this way can be a frustrating experience: many could hang up and some of them never call again!

*On the other hand, being able to entertain your customers on 'hold' with a courtesy message or, even better, an informative announcement about your new products or services, all with a pleasant background music of your choice, means that **your Company's image and relationships would certainly improve!***

- ◆ **Small sized SMD Sound Device**
- ◆ **Copyright-free musical selection**
- ◆ **32 to 64 seconds - EPROM Chip**
- ◆ **High-quality audio, excellent sound reproduction**
- ◆ **Advanced technology, doesn't wear out over time**

T7015 is a small and reliable device for internal Voice on Hold applications that can be connected to any telephone switchboard (PBX) with external analog or ISDN lines.

T7015 may be used as a digital sound source for several application, because its EPROM Chip is intended for long-term loop-cycle utilizations, where quality unaltered over time is a strict requirement.

Technical Characteristics:

Memory capacity	: 32sec or 64sec Eprom Chip
Audio Output	: adjustable from 0 to 775mVrms – 0dBm
Impedance	: 600 Ohm
Bandpass out	: 3400Hz
Power	: 9Vdc..30Vdc max, 15mA
Dimensions-Weight	: W49xH14xD49mm Weight 18 Gr.
Mechanical	: ABS plastic case
Connectors	: Edge pin 2.54mm

*Compatible with the most
common PBX models*

The manufacturer reserves the right to change product characteristics without notice
